

ULTRASONIC WELDING MACHINE WIN-C800

PRODUCT INFORMATION

Ultrasonic Welding Machine WIN-C800

This handheld ultrasonic welding machine is to weld by creating heat energy in the way of transforming high frequency electric energy into high frequency vibration, widely used for thermo plastic welding, riveting, spot welding, mounting and blank holding between metal components and plastic components, with advantages of low consumption, high efficiency and convenient operation.

SPECIFICATIONS

Small Structure

Small, light, portable and flexible.

Ultrasonic Generator

Stable ultrasonic generator.

Ultrasonic Transducer

Efficient ultrasonic transducer with strong power and good stability.

LCD Display Screen

LCD display screen makes operation easily and safely.

Efficient Welding

High welding efficiency, low cost and environmental protection.
